|  | Topic Title and NC link | $\begin{aligned} & \text { A8, A4, A11, A1, } \\ & \text { G8, R9 } \end{aligned}$ | $\begin{aligned} & \text { G5, G10, G11, A15, } \\ & \text { A16 } \end{aligned}$ | G1, G2, G4, G9 | G1, G14, A5, A7 | N3, S3, G8, G14 | S1, S2, P1, P2, P3 |
| Year 9 Core | Pupils should know... | - How to find missing points in shapes <br> - How to find midpoints of lines <br> - How to plot linear graphs including horizontal and vertical <br> - How to identify gradient and intercept <br> - How to give the equation of a line. <br> - How to reflect in horizontal, vertical and diagonal mirror lines <br> - Identify mirror lines and equations <br> - What invariant means <br> - The conventions for labelling | - How to find the term to term rule of a sequence and use it to generate terms of an arithmetic sequence <br> - How to find the position to term rule and use it to generate terms of an arithmetic sequence <br> - What is a quadratic and geometric expression <br> - Expand two brackets <br> - Expand more than two brackets <br> - Factorise a quadratic expression in different forms | - What does enlargement mean <br> - How to identify if a shape has been enlarged <br> - How to enlarge a shape with whole number and fractional scale factors <br> - How to enlarge from a centre <br> - How to find the centre of enlargement <br> - The meaning of similarity and congruence <br> - How to prove shapes are similar or congruent <br> - Difference between proof and demonstration <br> - How to construct triangles using a protractor and a compass | - How to draw a bar model to represent an equation <br> - How to solve equations with variables on one and both sides <br> - How to solve equations with fractions <br> - Rearranging simple equations <br> - In trigonometry corresponding sides are proportional <br> - How to graph inequalities and recognise regions | - What translation means <br> - What a vector is and how it is written <br> - What a translation looks like <br> - What rotation is <br> - What rotation looks like <br> - How to describe a transformation <br> - Find HCF, LCM and unique factorisation theorem <br> - How to calculate the equation of parallel and perpendicular lines <br> - How to calculate the volume of a cuboid <br> - What is cross sectional area | - What is a scatter graph and what is it used for <br> - What is a line of best fit <br> - How to read information from a scatter graph <br> - Know and use the terms positive and negative correlation <br> - Understand what is meant by relationship <br> - Understand the terms interpolation and extrapolation <br> - How to find averages from lists <br> - Understand what range measures <br> - What are quartiles <br> - What is the interquartile |

|  | angles, sides and lines <br> - How to identify alternate, cointerior and corresponding angles <br> - How to use our known angle facts to calculate missing angles on a straight line, at a point, in triangles and quadrilaterals <br> - Use ratio <br> - Draw and interpret scale diagrams <br> - Draw and use bearings |  | - Label sides of a right-angled triangle <br> - Know Pythagoras' theorem and be able to apply it to a question <br> - How to construct line and angle bisectors using a compass <br> - How to construct loci |  | - What is the formula for volume of a 3D shapes <br> - How to find the volume of cubes, cuboids and triangular prisms | range and what does it tell us <br> - Drawing and interpreting frequency diagrams <br> - What is probability <br> - What is the probability scale <br> - How to calculate a probability |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Pupils should be able to do... | - Plot linear graphs <br> - Interpret linear graphs <br> - Fill in missing co-ordinates on a table. <br> - Identify whether a coordinate is on a given line from the equation <br> - reflect in horizontal, | - Expand and factorise quadratic expressions <br> - Identify subtracting the squares <br> - Use Wendy's way to factorise harder quadratic expressions <br> - Find missing angles in parallel lines | - Enlarge a shape with and without a centre <br> - Describe an enlargement <br> - Find missing information from similar shapes <br> - Prove that shapes are congruent <br> - Find the missing hypotenuse of a right-angled triangle | - Able to solve equations where the coefficient of $x$ is a fraction <br> - Able to rearrange equations including formulas <br> - How to apply knowledge of area of circles to finding volume | - To be able to translate a shape with worded instructions <br> - To translate a shape using a given vector <br> - To describe fully a translation <br> - To be able to rotate a shape, including with a given number | - Use the product rule for counting <br> - Calculate the quartiles from data and find the interquartile range <br> - Compare data <br> - State the chance of an event happening <br> - Calculate a probability |

|  | vertical and diagonal mirror lines <br> - Identify mirror lines and equations <br> - Identify invariant points <br> - Problem solve with multipliers <br> - Build on ratio from year 8. Apply this to a new context <br> - Apply angle facts from Year 8 to bearing questions | - Solve more complex angle problems <br> - Draw the plan and elevations of a 3D shape <br> - Interpret plans and elevations <br> - What the nth term is <br> - How to recognise special sequences | - Find one of the other missing sides of a rightangled triangle <br> - Solve problems using Pythagoras' theorem <br> - Apply Pythagoras' theorem to 3D problems | - How to apply the knowledge of volume to problem solving questions <br> - Draw straight line graphs and read inequalities <br> - Label a triangle <br> - Know the trigonometric ratios <br> - Use the ratios to find unknown lengths and angles | of degrees, direction and centre of rotation <br> - To describe fully a rotation <br> - Answer problems using prime factor lists <br> - Find the volume of 3D shapes and any prisms. <br> - Recognise equations of lines that are parallel and perpendicular | given some data <br> - Answer problems on probability include chance of something not happening <br> - Show a probability on a numberline <br> - Draw a scatter graph from a set of data <br> - Draw a line of best fit <br> - Describe the correlation <br> - Describe the relationship <br> - Read values from a scatter graph and make predictions using a line of best fit and interpolation and extrapolation |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Why are we doing this now? How does it build on prior learning and prepare for knowledge and learning still to come? | Algebra skills studied with students in year 8 allow connections to be made from coordinate work from KS2 and linear sequences from year 8 to | Further sequences building on those learnt in year 8 and using further algebra skills. Pupils further develop their algebra skills linking this back to grid multiplication. Factorising is linked | Pupils have understanding of multipliers and how these apply to real life situations. This ties in to enlargement and similarity | Algebra in year 8 helped develop skills using bar models and beyond. This now continues with harder algebra. | Rotations and translations are taught separate to the other transformations to aid students remember the difference between them. | Pupils learn averages at KS2 and this unit builds on this looking at comparing and selecting the best average to use. |

|  |  |  |  |  | Find the <br> reciprocal of <br> numbers <br> Find gradients, <br> intercepts and <br> equations of <br> lines |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
